

Management Module

The E-Toolbox software is designed for managing data related to environmental management and occupational health and safety.

Management module

This E-Toolbox module is suited for registering and managing the projects of the company related to EHS and tasks arising from legal obligations.

How does the Management module work?

The program, filled up with the current legislation lists automatically creates requirements, which helps you to meet the obligations or assess the non-conformities. There is a possibility for customizing your own projects from an existing sample, or even generating completely specific task lists. Responsibilities and deadlines can be added to each task, so the list of open and closed tasks can be displayed sorted by person or group of persons. Audits and goals/programs can be managed easily. EHS suggestions can be collected and evaluated.

The program offers:

- Requirements assigned to legislations on a law or even paragraph level
- Recording of tasks arising from legislation, official decisions and audits
- Entering repetitive tasks, issues
- Handling documents related to permits with deadlines and activities.
- E-mail notifications of tasks related to users
- Setting up permissions and functionality for users, sites and organizations
- Can handle legislative updates and follow up of changes in requirements
- Management system support for goals/programs, audits and documents

Related services

The installation of the software is connected with theoretical and practical training.

Continuous support is provided in order to manage the problems which may occur during the use of the software, as well as for satisfying the demands for development
